Table of Contents

1. Commitment to achieving net zero..... 3

2. Baseline Emissions Footprint..... 3

3. Current Emissions Reporting 3

4. Emissions Reduction Target 3

5. Carbon Reduction Projects 4

6. Declaration and sign-off 4

1. Commitment to achieving net zero

EpiGuard AS is committed to achieving net zero greenhouse gas emissions by **2050** for its operations.

As a small medical technology company, EpiGuard recognizes its responsibility to reduce the environmental impact of its activities and products. While EpiGuard is at an early stage in its carbon reporting journey, the company is committed to developing a structured approach to emissions measurement, reporting, and reduction over time. This plan outlines EpiGuard's current position and intended next steps.

2. Baseline Emissions Footprint

Baseline Year: 2026

EpiGuard has not previously conducted a formal greenhouse gas inventory and does not currently have sufficient activity data available to accurately calculate Scope 1, Scope 2, and Scope 3 emissions in accordance with the GHG Protocol.

As a small organization, EpiGuard is in the early stages of establishing environmental reporting processes. During the next 12 months, EpiGuard intends to identify relevant emission sources, establish data collection procedures, and evaluate methodologies for calculating emissions associated with its operations.

Accordingly, a comprehensive emissions baseline is not yet available. This Carbon Reduction Plan is being published in accordance with NHS requirements and will be updated as emissions data becomes available.

Emissions	Total (tCO₂e)
Scope 1	Not yet measured
Scope 2	Not yet measured
Scope 3 (included sources)	Not yet measured
Total Emissions	Not yet measured

3. Current Emissions Reporting

Reporting Year: 2026

EpiGuard has not yet completed a formal greenhouse gas emissions assessment and therefore does not currently report Scope 1, Scope 2, or Scope 3 emissions.

Emissions	Total (tCO₂e)
Scope 1	Not yet measured
Scope 2	Not yet measured
Scope 3 (included sources)	Not yet measured
Total Emissions	Not yet measured

4. Emissions Reduction Target

As EpiGuard does not currently have a verified emissions baseline, the company is not in a position to establish quantitative carbon reduction targets.

Over the next five years, EpiGuard intends to:

- Establish a greenhouse gas emissions baseline.
- Develop internal processes for collecting relevant activity data.
- Improve understanding of emissions associated with facilities, travel, logistics, and purchased goods and services.
- Review potential opportunities for reducing emissions across operations and the supply chain.
- Periodically review and update emissions reduction objectives as more robust data becomes available.

Following completion of a baseline emissions assessment, EpiGuard intends to evaluate appropriate medium-term and long-term reduction targets.

5. Carbon Reduction Projects

Completed Environmental Management Measures:

EpiGuard has implemented a number of practices that support environmental sustainability as part of its business operations, including:

- Designing products for repeated use and long operational lifetimes where clinically appropriate.
- Reducing unnecessary waste through careful inventory management.
- Utilizing digital communications and electronic document management systems to limit paper consumption.
- Encouraging virtual meetings where practical to reduce business travel.

While these initiatives have not yet been quantified in terms of greenhouse gas reductions, they form part of EpiGuard's broader commitment to responsible environmental management.

Future Carbon Reduction Initiatives:

Over the next 12 to 24 months EpiGuard intends to:

- Identify and document material sources of Scope 1, Scope 2, and relevant Scope 3 emissions.
- Establish a methodology for emissions measurement aligned with recognized reporting standards.
- Improve collection of travel, utility, and freight-related activity data.
- Engage with suppliers regarding environmental performance where appropriate.
- Evaluate opportunities to reduce packaging waste and transportation-related emissions.
- Continue to support remote collaboration and digital workflows where practical.
- Review opportunities to improve the environmental performance of future product generations.

These initiatives are intended to support the development of a more comprehensive sustainability program and enable future emissions reduction planning.

6. Declaration and sign-off

This Carbon Reduction Plan has been completed in accordance with NHS Supply Chain requirements and the principles set out in PPN 006.

At the date of publication, EpiGuard has not yet completed a full greenhouse gas inventory and therefore cannot provide quantified Scope 1, Scope 2, or Scope 3 emissions figures. The company is committed to establishing appropriate emissions reporting processes and updating this Carbon Reduction Plan as data becomes available.

This Carbon Reduction Plan has been reviewed and approved by the management of EpiGuard AS.
